Profile

I hold a Bachelor's and a Master's degree in Telecommunication Engineering from the University of Alcalá, and I am currently pursuing a PhD in Communication Networks and Information Systems. Within engineering, I am particularly interested in applied research, distributed systems, and intensive computing, and I have oriented my professional background toward the development of data analysis platforms, multithreaded and cluster computing, and the construction of reproducible environments for experimentation. My experience combines scientific work with technical development, including deployment automation, parallel processing, and the use of virtualization, containerization, and orchestration technologies to accelerate testing cycles, support result validation, and provide reliable research infrastructures.

Education

Master's Degree in Telecommunication Engineering	University of Alcalá	<i>February 2026</i>
Bachelor's Degree in Telecommunication Engineering	University of Alcalá	<i>July 2024</i>
2nd in class and Extraordinary Award		

Experience

Applied research and reproducible infrastructures *September 2024 – January 2026*
University of Alcalá, Alcalá de Henares

- Designed and deployed containerized services using Docker and containerd, as well as orchestrators such as Docker Compose, Kubernetes, and OpenShift.
- Integrated automated deployment workflows for test and production environments using GitHub Workflows and Vagrant.
- Developed parallel processing pipelines in Python, MATLAB, and C for intensive workloads and data analysis.

Systems, security and technical support *February 2024 – August 2024*

Correos y Telégrafos S.A., Madrid

- Worked on the operation and documentation of network equipment and corporate systems.
- Managed security and authentication services such as RADIUS, LDAP, OAuth2, and TLS.
- Participated in deployments and DevOps practices, integrating automation into CI/CD pipelines.
- Administered enterprise Linux systems, mainly RHEL and Amazon Linux 2.

Applied engineering and research *January 2023 – January 2024*

University of Alcalá / Correos y Telégrafos S.A., Alcalá de Henares

- Developed MVC-based web data analysis platforms for research projects.
- Implemented multithreaded and cluster computing solutions for intensive processing tasks.
- Administered Linux environments and networked computing systems.
- Contributed to scientific activity and co-authored publications [ORCID](#) [🔗](#).

Skills

Programming: C/C++, Python, MATLAB, Bash, Groovy

Processing and computing: Multithreaded computing, parallel processing, cluster computing

Infrastructure: Linux, Docker, containerd, Docker Compose, Kubernetes, Red Hat OCP, Vagrant

CI/CD: GitHub Workflows, Jenkins, GitHub/GitLab

Languages

Spanish (native) • English (advanced)
